

Case Study - Overhead Line Equipment (OLE)

In 2015 CWE Ltd looked to diversify into Rail Infrastructure. The resulting project with Unipart Rail and Volker Rail was a major step forward in this area for CWE. The stations, bridges and associated steelwork were made in the fabrication shop at Crowle and then delivered to site. CWE personnel travelled to the site to observe the end project managed by the Staffordshire Rail Alliance. All steelwork was delivered on time and to specification.
